

AOC Unveils 27-inch High Definition LED Monitor with 2ms Response Time

AOC's e2752Vh combines solid performance, impressive image quality and energy efficiency into one sleek display

Fremont, Calif. – February 15, 2012– AOC, the worldwide leader in monitor display technology, announces the e2752Vh, a widescreen 27-inch LED monitor that delivers stunningly crisp and impressive image quality, as well as solid performance with a two millisecond response time. Ideal for multimedia applications, the energy efficient display also features two built-in 2.5 watt speakers for SRS-quality sound and is perfectly suited for PC gaming and Home Theater environments. The [e2752Vh](#) will be available for \$299.99 in April at national retailers including TigerDirect, Best Buy, Newegg and Amazon, among others.

“This cost-effective WLED monitor cuts down on energy consumption while offering the features that power users search for in a display – an extremely fast response time, impressive image quality and a sizeable screen,” said Robert Velez, AOC Marketing Manager.

The e2752Vh is able to display 16.7 million colors and offers a 2ms response time that provides crisp, clear images even in fast action sequences while gaming or watching action films. The ultra-high dynamic contrast ratio of 20,000,000:1 reveals more depth and detail in darker scenes, while built-in speakers provide improved desktop sound. The versatile monitor is VESA 100mm wall mount compliant, meaning that it can be used on a desktop or conveniently mounted on the wall to save space.

The monitor's slim and streamlined appearance is complemented by ergonomic, user-friendly design. The e2752Vh includes easily accessible digital and power connections that are rear-facing for direct

insertion, a placement that is much more convenient than the more common downward-pointing ports. The monitor settings can be adjusted via the on-screen menu system, which is available in 14 languages including English, French and Spanish. The iMenu option also allows the user to change settings using only the keyboard and mouse, so that it is not necessary to reach up to the screen to adjust contrast, brightness and other preset modes. Other bonus features include embedded Screen+ software that divides the screen into four self-contained work areas for improved productivity, and an Off Timer that sets an alarm clock to turn off the monitor automatically.

Along with delivering strong performance, image quality and bonus features, the ENERGY STAR-compliant e2752Vh also reduces energy costs and environmental impact. The display's LED backlight is completely free of toxic Mercury, and the monitor also includes an eSaver feature that lets the user preset power conservation modes for the display when the PC is not in use. The monitor's Power Saving Mode uses 50 percent less power, and Standby Mode uses only 0.1w.

Specifications

- 27" viewable image size, diagonal
- 20,000,000:1 Dynamic Contrast Ratio
- 2ms GTG response time
- 16:9 Aspect ratio
- 300 cd/m² typical brightness
- 1920x1080@60Hz resolution
- DVI-D with HDCP, HDMI with HDCP digital inputs
- Built-in speakers: 5 Watts
- Windows 7 compatible
